Prolog

程序代写代做 CS编程辅导

- Prolog — *Programming in Prolog*
- Invented early 70s by Alain Colmerauer et al., University of Marseille
- *Declarative language*
 - Specify goal and interpreter/compiler will work out how to achieve it
 - Traditional (imperative) languages require you to specify how to solve problem
- Prolog program specifies:
 - facts about objects and their relationships
 - rules about objects and their relationships

Relations

程序代写代做 CS编程辅导

- Prolog programs specify relationships among objects and properties of objects
- When we say, “John owns a book”, we are declaring the ownership relation between two objects: John and the book
- When we ask, “Does John own the book?”, we are querying the relationship
- Relationships can also be rules such as:
Two people are sisters if
both are female
they have the same parents
- This is a rule that allows us to find out about a relationship even if the relationship isn't explicitly declared

Representing Regulations

程序代写代做 CS编程辅导

The rules for entry into a professional computer science society are set out below:

An applicant to the society is acceptable if he or she has been nominated by two established members of the society and is eligible under the terms below:

- the applicant graduated with a university degree
- the applicant has two years of professional experience
- the applicant pays a joining fee of \$200.

An established member is one who has been a member for at least two years.

Facts

程序代写代做 CS编程辅导

- Properties of objects; relationships between objects
- Example
 - “Maurice lectures in comp4418”
 - Prolog: `lectures(maurice, comp4418)`
- Notice
 - Names of properties/relationships begin with lower-case
 - Name of relationship appears as first term, objects appear as arguments
 - Fact terminated by ‘.’
 - Objects (*atoms*) also begin with lower-case characters
- `lectures(maurice, 4418)` also called a *predicate*

WeChat: cstutorcs

Actions not begin with lower-case

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Facts

程序代写代做 CS编程辅导

Let us return to the regulation

```
experience(fred, 3).
```

```
fee_paid(fred).
```

```
graduated(fred, unsw).
```

```
university(unsw).
```

```
nominated_by(fred, jim).
```

```
nominated_by(fred, mary).
```

```
joined(jim, 2015).
```

```
joined(mary, 2016).

Prolog Database

A collection of facts about a hypothetical computer science department:

```
% lectures(X, Y): person X lectures in course Y
```

```
lectures(tony, comp1001).
```

```
lectures(andrew, comp2041).
```

```
lectures(john, comp2041).
```

```
lectures(gernot, comp3231).
```

```
lectures(arun, comp4141).
```

```
lectures(sowmya, comp4411).
```

```
lectures(claude, comp4411).
```

```
lectures(maurice, comp4418).
```

```
lectures(adnan, comp4418).
```

```
lectures(adnan, comp9518).
```

```
lectures(wayne, comp4418).
```

```
lectures(arthur, comp9020).
```

```
% studies(X, Y): person X studies course Y
```

Queries

程序代写代做 CS编程辅导

- Once we have a database (and, soon, rules) we need to be able to ask questions of the information that is stored
- `lectures(maurice, comp4418)`
- Notice:
 - Query is terminated by a question mark '?'
 - To determine answer (yes or no), Prolog consults database checking whether this is a known fact
 - For example, `lectures(bob, comp4418)?`
`**no`
 - If answer is *yes*, query *succeeded*; otherwise, if answer is *no*, query *failed*

Variables

程序代写代做 CS编程辅导

- Suppose we want to ask, “What subject does John teach?”
- This could be phrased as
Is there a subject, X, that John teaches?
- The variable X stands for an object that the questioner does not yet know about
- To answer the question, Prolog has to find the value of X, if it exists
- As long as we do not know the value of the variable, it is said to be *unbound*
- When a value is found, the variable is *bound* to that value

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Variables

程序代写代做 CS编程辅导

- A variable must begin with a capital letter or '_'
- To ask Prolog to find the subjects that John teaches, type:
: lectures(john, Subject) ?

Subject = comp2041

WeChat: cstutorcs

- To ask which subjects that Adnan teaches, ask:
: lectures(adnan, X) ?

Assignment Project Exam Help

Email: tutorcs@163.com

X = comp4418

QQ: 749389476

X = comp9518

<https://tutorcs.com>

Prolog can find all possible ways to satisfy a query

Conjunction in Queries

程序代写代做 CS编程辅导

- How do we ask, “Does Arthur lecture in a subject that Jack studies?”
- This can be answered by asking whether Arthur lectures in a subject that Jack studies:

`lectures(arthur, Subject), studies(jack, Subject)?`

WeChat: cstutorcs

- i.e., Arthur lectures in subject, *Subject*, and Jack studies subject, *Subject*.
- *Subject* is a variable
- The question consists of two goals
- To find the answer, Prolog must find a single value for *Subject* that satisfies both goals

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389478

<https://tutorcs.com>

Conjunctions

- Who does Adnan teach:
: lectures(adnan, Subject), studies(Student, Subject)?

Subject = comp4418

Student = jane

Subject = comp9518

Student = jack

WeChat: cstutorcs

- Prolog solves problems by *assigning* left to right and then *backtracking*
- Given the initial query, Prolog tries to solve
lectures(adnan, Subject)
- There are twelve lectures clauses but only two have adnan as first argument
- Prolog chooses the first clause containing a reference to adnan i.e.,
lectures(adnan, 4418)

Assigned Project Exam Help

Email: tutors@163.com

QQ: 749389476

http://unsw.edu.au

Proof Tree

- With Subject = 4418, it then tries to satisfy the next goal, viz `studies(Student, 4418)`
- After the solution is found, it retraces its steps and looks for alternative solutions
- It may now go down the branch containing `lectures(adnan, 9518)` and try `studies(Student, 9518)`

程序代写代做 CS编程辅导

WeChat: cstutorcs

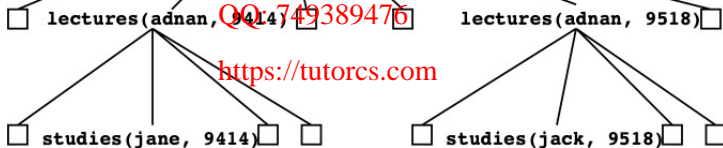

`lectures(adnan, Subject), studies(Student, Subject)?`

Rules

程序代写代做 CS编程辅导

- The previous question can be restated as a general rule:
One person, Teacher, teaches another person, Student if
Teacher *lectures* some Subject **and**
Student *studies* Subject

- In Prolog this is written as the:
`teaches(Teacher, Student), % This is a clause
lectures(Teacher, Subject),
studies(Student, Subject).`

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

`teaches(adnan, Student)?`

<https://tutorcs.com>

- Facts are *unit clauses* and rules are *non-unit clauses*

Rules

```
acceptable(Applicant) :-
```

```
    nominated(Applicant), 程序代写代做 CS编程辅导
```

```
    eligible(Applicant).
```

```
nominated(Applicant) :-
```

```
    nominated_by(Applicant, Member1),
```

```
    nominated_by(Applicant, Member2),
```

```
    Member1 \= Member2, WeChat: cstutorcs
```

```
    current_year(ThisYear), Assignment Project Exam Help
```

```

```
eligible(Applicant) :-
```

```
    graduated(Applicant, University), QQ: 749389476
```

```
    experience(Applicant, Experience), Experience >= 2,
```

```
    fee_paid(Applicant).
```

Unps://nstutys.com

Clause Syntax

程序代写代做 CS编程辅导

- ‘:-’ means “if” or “is implied by”. Also called “neck”
- The left hand side of the clause is called the *head*
- The right hand side is called the *body*
- The comma, ‘,’ separating the goals stands for *and*

```
more_advanced(Student1, Student2) :-
```

```
    year(Student1, Year1),
```

```
    year(Student2, Year2),
```

```
    Year1 > Year2.
```

- Note the use of the *predefined* predicate ‘>’

```
more_advanced(jane, mary)?
```

```
more_advanced(jack, X)?
```

Structures

程序代写代做 CS编程辅导

- Functional terms can be used to construct complex data structures
- E.g., to say that John owns a book *Foundation*, this may be expressed as:
`owns(john, 'Foundation')`.
- Often objects have a number of attributes
WeChat: cstutorcs
- A book may have a title and an author
Assignment Project Exam Help
`owns(john, book('Foundation', asimov))`.
Email: tutorscs@163.com
- To be more accurate we should give the author's family and given names:
QQ: 749389476
`owns(john, book('Foundation', author(asimov, isaac)))`.

<https://tutorcs.com>

Asking Questions with Structures

- How do we ask:

“What books does John own that were written by someone called “Asimov”?

```
: owns(john, book(Title, asimov, GivenName)))?  
Title = Foundation  
GivenName = isaac
```

程序代写代做 CS编程辅导

WeChat: cstutorcs

```
: owns(john, Book)?  
Book = book(Foundation, author(asimov, isaac))
```

Assignment Project Exam Help

Email: tutorcs@163.com

```
: owns(john, book(Title, Author))?  
Title = Foundation
```

QQ: 749389476

```
Author = author(asimov, isaac)
```

<http://tutorcs.com>

Databases

程序代写代做 CS编程辅导

- A database of books in a library contains facts of the form:
 - `book(CatNo, Title, Family, Given)`.
 - `member(MemNo, name(Given), Address)`.
 - `loan(CatNo, MemNo, Borrowed, Due)`.
- A member of the library may borrow a book
- A “loan” records:
 - the catalogue number of the book
 - the number of the member
 - the borrow date
 - the due date

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Database Structures

程序代写代做 CS编程辅导

- Dates are stored as struct
date(Year, Month, Day) is 8 September 2001
- E.g., date(2001, 9, 8)
- Names and addresses are all stored as character strings
- Which books has a member borrowed?

has_borrowed(MemFamily, Title, CatNo) :-
 memb(MemNo, name(MemFamily, _),
 loan(CatNo, MemNo, _),
 book(CatNo, Title, _)).

- Which books are overdue?

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Overdue Books

程序代写代做 CS编程辅导

```
later(date(Y, M, D1), date(Y, M, D2)) :- D1 > D2.  
later(date(Y, M1, _), date(Y, M2, _)) :- M1 > M2.  
later(date(Y1, _, _), date(Y2, _, _)) :- Y1 > Y2.
```

```
later(date(2001, 12, 3), date(1999, 8, 3))?
```

Assignment Project Exam Help

```
overdue(Today, Title, CatNo, MemFamily) :-
```

```
    loan(CatNo, MemNo, _, DueDate),
```

```
    later(Today, DueDate),
```

```
    book(CatNo, Title, _),
```

```
    memb(MemNo, name(MemFamily, _)).
```

Email: cs@163.com

QQ: 749389476

<https://tutorcs.com>

Due Date

程序代写代做 CS编程辅导

```
due_date(date(Y, M1, D), date(Y, M2, D)) :-  
    M1 < 12,  
    M2 is M1 + 1.  
due_date(date(Y1, 12, D), date(Y2, 1, D)) :-  
    Y2 is Y1 + 1.
```

WeChat: cstutorcs

- `is` accepts two arguments
- The right hand argument must be an evaluable arithmetic expression
- The term is evaluated and unified with the left hand argument
- It *is not* an assignment statement
- Variables *cannot* be reassigned
- Arguments of comparison operators can also be arithmetic expressions
