# What is Knowledge?

• can be true / false, right /

Contrast: "John fears that ..."

• same content, different a 🖫 ដីជំ

Other forms of knowledge: WeChat: cstutorcs

- know how, who, what, when Assignment Project Exam Help
- sensorimotor: typing, riding a bike
- affective: deep understanding Email: tutorcs@163.com

Belief: similar, but not necessary the and or appropriate reasons

and weaker yet: "John suspects that's: "om

Here: no distinction

The main idea: taking the world to be one way and not another

# What is Representation?

程序代写代做 CS编程辅导

Symbols standing for things i

- ← → first aid
- $\parallel \parallel \longrightarrow$  restaurant
- "Alice" → Alice

WeChat: cstutorcs

• "John loves Mary" -> the proposition thias Unimovels Mary

Knowledge representation: Email: tutorcs@163.com symbolic encoding of propositions believed (by some agent)

QQ: 749389476

# What is Reasoning?

#### 程序代写代做 CS编程辅导

Manipulation of symbols encoding propositions to produce representations of new propositions Analogy: arithmetic "1011" + "10" eChat: cstutorcs eleven Assignment Project Exam Help Analogy: relationships — Emaidhtatierest@dfiltemale" "John is Mary's father" OO: 749389476 →https://tutorcs.com

# Why Knowledge?

For sufficiently complex systems it is sometimes useful to describe systems in terms of beliefs, goals, fears, intentions

- e.g. a game-playing prog "because it believed its questions in danger, but wanted to still control the center of the board."
- more useful than description about actual techniques used for deciding how to WeChat: cstutores move

"because evaluation procedure P using minimax returned a value of +7 for Assignment Project Exam Help this position"

= taking an intentional stance Floanietu Decreett 63.com

#### But...

Is KR just a convenient way of describing complex systems?

- sometimes anthropomorphizingtiscinappropriate e.g. thermostats
- can also be very misleading! fooling users into thinking a system knows more than it does

# Why Representation

Note: intentional stance says nothing about what is / is not represented symbolically

 e.g. in game playing perhaps the board position The position but the goal of getting a knight out early is not

KR Hypothesis: (Brian Smith)

"Any mechanically embodied intelligent process will be comprised of structural ingredients that a) we as external observers naturally take to represent a propositional account of the knowledge that the overall process exhibits, and b) independent of such external semantic attribution, blay helpormal but causal and essential role in engendering the behaviour that manifests that knowledge."

Two issues: existence of structures that 7389476

- we can interpret propositionally
- determine how the system behaves tutorcs.com

Knowledge-based system: one designed in this way!

# **Two Examples**

#### Example 1

#### 程序代写代做 CS编程辅导

```
printColour(snow) :- !, write("It's white.").
printColour(grass) :- !, write("It's green.")
printColour(sky) :- !, write("It's yellow.").
printColour(X) :- write("Beats me.").
```

#### Example 2

```
printColour(X) :- colour(X,Y), !,
   write("It's "), write(Y), write(".").
printColour(X) :- write("Beats me.").
colour(snow,white).
colour(x,y,yellow).
colour(X,Y) :- madeof(X,Z), colour(Z,Y).
madeof(grass,vegetation).
colour(vegetation,green).
```

Both systems can be described it first all properties and the systems can be described in the system of the systems can be described in the system of the systems can be described in the system of the sy

Only the 2nd has a separate collection of symbolic structures à la KR Hypothesis; its **knowledge base** (or KB)

... small knowledge-based system

# **KR and Artificial Intelligence**

Much of Al involves building systems that are knowledge-based.

Ability derives in part from reasoning over the problem of the

- language understanding,
- planning,
- diagnosis,
- "expert systems",
- ..

Some, to a certain extent

- game-playing,
- vision,
- ..

Some, to a much lesser extent

- speech,
- motor control,
- ...

Current research question:

how much of intelligent behaviour is knowledge-based?

Challenges: connectionism, others

Email: tutorcs@163.com

QQ: 749389476

# Why Bother?

Why not "compile out" knowledge intespecialized procedures?

- distribute KB to procedures that need it (as in Example 1)
- almost always achieves the formance

No need to think. Just do it!

• riding a bike WeChat: cstutorcs

• driving a car

Assignment Project Exam Help

• playing chess?

Email: tutorcs@163.com

• doing math?

• staying alive?? QQ: 749389476

Skills (Hubert Dreyfus) https://tutorcs.com

novices think; experts react compare to "expert systems": knowledge-based!

# **Advantage**

explanation and justification
 "Because grass is a form of the second s

informability: debugging the King
 "No the sky is not yellow. It's

 extensibility: new relations "Canaries are vellow." WeChat: cstutorcs

Assignment Project Exam Help

new applications

returning a list of all the white things painting pictures

Hallmark of KB'ed system:

the ability to be told facts about the world and adjust behaviour correspondingly

"Cognitive penetrability" (Zenon Pylyshyn)

actions that are conditioned by whatsis/cutrently/doelieved

e.g. do not leave the room on hearing a fire alarm if we believe that the alarm is being tested so this action is cognitively penetrable

# Why Reasoning?

#### 程序代写代做 CS编程辅导

Want knowledge to affect actimes.

not do action A if senter in KB

but do action A if world in satisfies P

Difference:

P may not be explicitly represented utores

Need to apply what is known to particulars of given situation

Example:

Assignment Project Exam Help

"Patient x is allergic to medication m."

"Anybody allergic to medication m is also allergic to medication m'."

Is it OK to prescribe m' for 749389476

Usually need more than just DB-style retrieval of facts in the KB https://tutorcs.com

### **Entailment**

Sentences  $P_1, P_2, ..., P_n$  entail representation of  $P_1, P_2, ..., P_n$ .

If the world is such that it  $P_i$ , then it must also satisfy P.

Applies to a variety of lan

Inference: the process of calculating entailments

sound: get only entailments Chat: cstutorcs

complete: get all entailments Assignment Project Exam Help

Sometimes want unsound / incomplete reasoning

we won't discuss this casement the tutores @ 163.com

Logic: study of entailment relations, 749389476

- languages
- · truth conditions

https://tutorcs.com

rules of inference

# **Using Logic**

No universal language / semantics

Why not English?

Different tasks / worlds

Different ways to carve up the work

No universal reasoning scheme

Geared to language

Sometimes want "extralogical" reasoning

Start with propositional logic (PL) and the constant with the const

invented by philosopher Frege for the formalization of mathematics

but will consider subsets / supersets and iveny differ the discharge of the light in languages (in particular, Horn

Email: tutores@163.com

程序代写代做 CS编程辅导

logic)

Allen Newell's analysis:

Knowledge level: (semantic)

deals with language, entailment QQ: 749389476

Symbol level: (computational)

deals with representation, inference

Picking a logic has issues at each level <a href="https://tutorcs.com">https://tutorcs.com</a>

KL: expressive adequacy, theoretical complexity, ...

SL: architectures, data structures, algorithmic complexity

Next: we begin with PL at KL
